§870.1370

commercial distribution before May 28, 1976, or that has, on or before December 26, 1996 been found to be substantially equivalent to a trace microsphere that was in commercial distribution before May 28, 1976. Any other trace microsphere shall have an approved PMA or a declared completed PDP in effect before being placed in commercial distribution.

[45 FR 7907-7971, Feb. 5, 1980, as amended at 52 FR 17736, May 11, 1987; 61 FR 50706, Sept. 27, 1996]

§870.1370 Catheter tip occluder.

- (a) *Identification*. A catheter tip occluder is a device that is inserted into certain catheters to prevent flow through one or more orifices.
- (b) Classification. Class II (performance standards).

§870.1380 Catheter stylet.

- (a) *Identification*. A catheter stylet is a wire that is run through a catheter or cannula to render it stiff.
- (b) Classification. Class II (performance standards).

§870.1390 Trocar.

- (a) *Identification*. A trocar is a sharp-pointed instrument used with a cannula for piercing a vessel or chamber to facilitate insertion of the cannula.
- (b) Classification. Class II (performance standards).

\$870.1425 Programmable diagnostic computer.

- (a) *Identification*. A programmable diagnostic computer is a device that can be programmed to compute various physiologic or blood flow parameters based on the output from one or more electrodes, transducers, or measuring devices; this device includes any associated commercially supplied programs.
- (b) Classification. Class II (performance standards).

§ 870.1435 Single-function, preprogrammed diagnostic computer.

(a) *Identification*. A single-function, preprogrammed diagnostic computer is a hard-wired computer that calculates a specific physiological or blood-flow

parameter based on information obtained from one or more electrodes, transducers, or measuring devices.

(b) Classification. Class II (performance standards).

§870.1450 Densitometer.

- (a) *Identification*. A densitometer is a device used to measure the transmission of light through an indicator in a sample of blood.
- (b) Classification. Class II (performance standards).

§ 870.1650 Angiographic injector and syringe.

- (a) *Identification*. An angiographic injector and syringe is a device that consists of a syringe and a high-pressure injector which are used to inject contrast material into the heart, great vessels, and coronary arteries to study the heart and vessels by x-ray photography.
- (b) Classification. Class II (performance standards).

§870.1660 Indicator injector.

- (a) *Identification*. An indicator injector is an electrically or gas-powered device designed to inject accurately an indicator solution into the blood stream. This device may be used in conjuction with a densitometer or thermodilution device to determine cardiac output.
- (b) Classification. Class II (performance standards).

§870.1670 Syringe actuator for an injector.

- (a) *Identification*. A syringe actuator for an injector is an electrical device that controls the timing of an injection by an angiographic or indicator injector and synchronizes the injection with the electrocardiograph signal.
- (b) Classification. Class II (performance standards).

§ 870.1750 External programmable pacemaker pulse generator.

(a) Identification. An external programmable pacemaker pulse generators is a device that can be programmed to produce one or more pulses at preselected intervals; this device is used in electrophysiological studies.
